Introduction **13**

1. Description of Diffusion **15**

1.1. Description of Normal Diffusion 15
1.1.1. Plan of Action 15
1.1.2. Fick's Diffusion 15
1.1.2.1. Fick's Laws
1.1.2.2. Propagator of Fick's Diffusion
1.1.2.3. Normal Distribution and Einstein's Relation
1.1.3. Normal Diffusion due to Cattaneo 17
1.1.4. Normal Diffusion due to Diffusion Principle 18
1.1.4.1. Verbal Formulation of Diffusion Principle
1.1.4.2. Superposition Possibility
1.1.4.3. Difference Equation
1.1.4.4. Solution to the Difference Equation
1.1.4.5. Transition to a Differential Equation
1.1.5. Further Proceeding 21
1.1.5.1. Limit Calculation to Fick's Diffusion Equation
1.1.5.2. Hypothesis on Variance

1.2. Classification of Diffusion 23
1.2.1. Comparing Measured Data with Theoretical Propagators 23
1.2.1.1. Problem
1.2.1.2. Variance Theorem
1.2.1.3. Importance of the Variance Theorem
1.2.2. Classification of Transport Processes via Variance 24
1.2.2.1. Confirmation of Einstein's Relation
1.2.2.2. Variance of the Static Wave Propagator
1.2.2.3. Classification Scheme of Diffusive Prozesses
1.2.3. Further Aspects of Diffusion Description 26
1.2.3.1. How to Deal with Drift in Dynamics
1.2.3.2. Generalization to Several Space Dimensions

1.3. Description of Anomalous Diffusion 28
1.3.1. The Formula by Wei, Bechinger, and Leiderer 28
1.3.2. Time Fractional Diffusion Equations 28
1.3.3. Space Fractional Diffusion Equations 29
1.3.4. Space and Time Fractional Diffusion Equations 30

1.4. Summary 30

2. Mathematical Methods **31**

2.1. Motivation 31

2.2. Dirac's Delta Function 31
2.2.1. Singular Integrals 31
2.2.2. Fourier Transformation of Number One 32
2.2.2.1. Properties of Fourier Transformation
2.2.2.2. Application of the Mean Value Theorem
2.2.2.3. Definition of the Delta Function due to Dirac
2.2.2.4. Determination of the Multiplicator of the Fourier Transformation
2.2.3. Mellin Transformation of Number One 34
2.2.3.1. Result from Fourier Transformation
2.2.3.2. Mellin Residue of the Delta Function
2.2.3.3. Independent Confirmation
2.2.3.4. Consequences from the Theorem by Mellin
2.2.4. The Momenta of the Delta Function 37
2.2.4.1. Connection between Mellin Transformation and Momenta
2.2.4.2. Calculation of the Delta Momenta
2.2.4.3. Possibilities of Enlarging Function Theory

2.3. Laplace and Fourier Transformation 39
2.3.1. Known Relations 39
2.3.1.1. Plan of Action
2.3.1.2. Idea of Propagator
2.3.1.3. Idea of Green's Function
2.3.2. Prolongations 41
2.3.2.1. Laplace Transformation of the Delta Function
2.3.2.2. Consequences for Computer Algebra
2.3.2.3. Laplace Convolution with Delta Function
2.3.2.4. Space and Time Dependent Steering Functions
2.3.2.5. Space Dependent Analytical Coefficients
2.3.2.6. Fourier Transformation of the Riesz Operator

2.4. Mellin Transformation 45
2.4.1. Difference Equations 45
2.4.1.1. Generating Linear Difference Equations
2.4.1.2. Solution to Linear Difference Equations
2.4.1.3. Fox's H-Functions
2.4.2. Momenta Calculation from Laplace Transforms 47
2.4.2.1. Motivation
2.4.2.2. Calculation
2.4.3. Momenta Calculation from Fourier Transforms 48
2.4.3.1. Direct Calculation
2.4.3.2. Momenta of a Fourier Convolution

2.5. Summary 49

3. Solution to Fractional Diffusion Equations **51**

3.1. Solution to the Equation by Schneider and Wyss 51
3.1.1. Optimized Representation of the Equation 51
3.1.2. Solution Path 53
3.1.2.1. Laplace Transformation
3.1.2.2. Following Fourier Transformation
3.1.2.3. Fourier Transform of the Solution
3.1.2.4. Solution Function by Schneider and Wyss
3.1.3. Solution Properties 56
3.1.3.1. Solution Momenta
3.1.3.2. Series Representation and Asymptotics of the Solution
3.1.3.3. Graphic Representation of the One Dimensional Propagators
3.1.3.4. Similarity Representation of the Solution
3.1.3.5. Interesting Special Cases of the Solution

3.2. Further Dynamic Equations 63
3.2.1. Equation to the Solution by Wei et al. 63
3.2.1.1. Access in Fourier Space
3.2.1.2. Leading to the Formula by Wei et al.
3.2.1.3. Laplace and Fourier Transform
3.2.1.4. Problems
3.2.2. Way out 67

3.3. Solution to the Time and Space Fractional Diffusion Equation 68
3.3.1. Motivation 68
3.3.2. Solution to the Equation 69
3.3.2.1. Representation of the Equation
3.3.2.2. Laplace Transformation of the Equation
3.3.2.3. Following Fourier Transformation
3.3.2.4. Transforms of the Solution
3.3.2.5. Solution and Similarity Representation
3.3.2.6. Base Integrals to the Momenta Densities
3.3.2.7. Momenta

3.4. Summary 74

4. Discussion of Nucler Magnetic Relaxation **75**

4.1. Leading to the Task 75

4.2. Importance and Determination of the Structure Factor 75
4.2.1. Correlation Function 75
4.2.2. Mathematical Aspects 77
4.2.2.1. Fourier Convolution in Several Dimensions
4.2.2.2. Inverse Fourier Transformation in Several Dimensions
4.2.3. Influence of Fractal Surfaces 79

4.3. Power Law for the Relaxation Rate T_1 81
4.3.1. Evaluating Formula 81
4.3.2. Measurement on Relaxation Rate T_1 82
4.3.3. Comparison of Theory and Measured Data 83

4.4. Summary 84

5. Variance Aanalysis of Measured Diffusion Data **85**

5.1. Analytical Aspects 85
5.1.1. Properties of Measured Diffusion Data 85
5.1.1.1. Video Microskopy
5.1.1.2. Single File Diffusion
5.1.1.3. Alternative Voigt Profile
5.1.2. Properties of Diffusion Convolutios 87
5.1.2.1. Momenta of a Special Fourier Convolution
5.1.2.2. Variance of a Special Fourier Convolution
5.1.2.3. Variance of a further Special Fourier Convolution
5.1.2.4. Analytical Representation of Fourier Convolutions

5.2. Figures 91
5.2.1. First Examination of Measured Data 91
5.2.1.1. Variance Trimming
5.2.1.2. Properties at Distribution Maximum
5.2.2. Figures of Fourier Convolions 93
5.2.2.1. Short Times
5.2.2.2. Long Times
5.2.2.3. Convolution due to Wei et al.
5.2.2.4. Comparision of both Theories
5.2.3. Graphic Comparison to Measured Data 100
5.2.3.1. Schneider Wyss Theory
5.2.3.2. Formula by Wei et al.
5.2.3.3. Comparison of both Theories

5.3. Summary 103

Summary **105**

1. Variance Theorem 105
2. Delta Function 106
3. Anomalous Diffusion 106
4. Nuclear Magnetic Relaxation 107
5. Measuring Diffusion 108
6. Computer Algebra 108
7. Outlook 109

Appendices **111**

A. Variance Theorem 111
A.1. Definitions 111
A.2. Proof to the Variance Theorem 112
A.3. Consequences 113

B. Integral Transformations 115
B.1. Motivation 115
B.2. Fourier Transformations 115
B.2.1. Definitions
B.2.2. Properties
B.3. Inverse Fourier Transformations 116
B.3.1. Definitions
B.3.2. Properties
B.4. Mellin Transformation 118
B.4.1. Properties
B.4.2. Fourier Transformations
B.4.3. Laplace Transformation
B.4.4. Integrals

C. Mittag Leffler Function 123
C.1. Definition 123
C.2. Inverse Laplace Transform of an Algebraic Function 123
C.2.1. Underlying Mellin Transformation
C.2.2. Idea of Residual Optimizing
C.2.2.1. Generalization of a Property of Mellin Transformation
C.2.2.2. Application Fields to Residual Optimizing
C.2.2.3. Established Inconsistencies
C.2.3. General Access to the Mittag Leffler Function

D. Program Description 129
D.1. Survey 129
D.2. Description of the *FractionalCalculus* Packages 131
D.2.1. Package *FractionalCalculus.m* 131
D.2.1.1. Task
D.2.1.2. Concerned Notebooks
D.2.1.3. New Symbols
D.2.2. Package *Options.m* 132
D.2.2.1. Task
D.2.2.2. New Symbols
D.2.3. Package *Var.m* 133
D.2.3.1. Task
D.2.3.2. New and Supplemented Symbols
D.2.4. Package *Boole.m* 134
D.2.4.1. Task
D.2.4.2. New Symbols
D.2.4.3. Further Properties
D.2.5. Package *Synonyms.m* 136
D.2.5.1. Task
D.2.5.2. New Symbols
D.2.5.3. Further Properties
D.2.6. Package *Gamma.m* 138
D.2.6.1. Task
D.2.6.2. New Symbols
D.2.7. Package *Fox.m* 139
D.2.7.1. Task
D.2.7.2. New Symbols
D.2.8. Package *SymmetricalDelta.m* 140
D.2.8.1. Task
D.2.8.2. New Symbols
D.2.8.3. Further Properties
D.2.9. Package *MellinTr.m* 141
D.2.9.1. Task
D.2.9.2. New Symbols
D.2.9.3. Further Properties
D.2.10. Package *RiemannL.m* 142
D.2.10.1. Task
D.2.10.2. New Symbols
D.2.10.3. Further Properties
D.2.11. Package *Weyl.m* 143
D.2.11.1. Task
D.2.11.2. New Symbols
D.2.11.3. Further Properties

D.2.12. Package *ErdelyiKober.m* 144
D.2.12.1. Task
D.2.12.2. New Symbols
D.2.12.3. Further Properties
D.2.13. Package *Riesz.m* 145
D.2.13.1. Task
D.2.13.2. New Symbols
D.2.13.3. Further Properties
D.2.14. Package *IntegralTrafosExtensions.m* 145
D.2.14.1. Task
D.2.14.2. New Symbols (Help Text for $Version 3.0)
D.2.14.3. Further Properties
D.2.15. Package *MellinBarnesSeries.m* 149
D.2.15.1. Task
D.2.15.2. New Symbols
D.2.15.3. Further Properties
D.2.16. Package *Integral.m* 150
D.2.16.1. Task
D.2.16.2. New Symbols
D.2.16.3. Further Properties
D.2.17. Package *FractalDSolve.m* 151
D.2.17.1. Task
D.2.17.2. New Symbol
D.2.17.3. Further Properties
D.3. Protocol 152
D.4. Remarks 152

E. Abbreviations 153
E.1. Motivation 153
E.2. Symbols of Physical Quantity and Units 153
E.3. Further Abbreviations 154

F. Measured Data 155
F.1. Motivation 155
F.2. Measured Data by T. Zavada 155
F.3. Measured Data by Wei Q.-H. 156
