The Ararat is a free standing volcano of at least 15,000 feet height and due to the author's estimation the nicest panorama mountain of the earth. Today it is located in the east of the Turkish country.

Picture Origin: Photographer: Ali Mohammed, Shooting Place: Idre near Ararat

Shooting Time: morning (estimated from the shadow lines)

The southern flank of Ararat can be seen, as to be expected from the Bible report, too.

The southern flank is the longest and most flat slope of Ararat,
which all humans and animals needed to wander down.

The perspective can be measured by a ruler on the printed photograph, and then be calculated due to the rule of three into distance. The mistake of this estimation is about 10 %.

In about 15,000 feet height above the valey plain can be seen at the left hand side a horizontal line, which represents the landing strip for Noah's ark. It is at least 6,000 feet long and is positioned at about 13,800 feet height above sea level, this is about 3,600 feet higher than the place, where Frozen Franz has been found, which also is positioned within the perpetual ice at a watershed, where the glacier neither moves nor is crushing anything. It is sure since the saving of Frozen Franz on September 20th, 1989, that Noah's ark has been preserved extremely well in the deep-freeze of Ararat's glacier. Already years before a microbiologist has ordered from the author a piece of dung from the ark, if there would be an inspection one day. After the landing on Ararat, Noah and his

family had totally no time or power to shovel the whole dung of all animals and humans, which had gathered during a year, out of the lower part of the ship – what would had been the good of that?

Because of hydromechanical reasons, Noah's ark is positioned at a watershed, because during the landing about the same amounts of water needed to flow away into all 4 quarters of the heaven. God has driven high the volcano Ararat in millimetre precision under the ship without inflaming the ark. The reason is the fact, that water is cooling extremely well and solidified lava is isolating extremely well. If lava of about 1850 °F directly is contacting sea water (usually 40 °F and high hydrostatic pressure), then abruptly results a perfectly compact casting lava, which by geophysicists is called as *pillow lava* and understood technically to be submarine pressure casting. Only at low water pressure, or water depth respectively, the direct contact of water and lava yields steam on the whole, which better is named as a *vapour cloud*.

The stopping of the ship at the end of the landing is the most exciting task, because thereby the water must flow away equally to possibly 4 directions. 1 cubic metre of water weights a metric ton, therefore the most little transverse streams or pressure reflections would wash the stranded ship immediately back again into the sea and then with falling water level principally away from the mountain. Therefore Noah's ark is positioned at the left hand (western) end of the landing strip. There even a small hill on the landing strip is recognizable, which is fulfilling the demands to a possible landing. For physicists by this is reckoned up, that a living God exists, who has ordered to ascend the Ararat at this very location out of the roaring sea at the end of the great flood. On this day the streams were so big, that the whole Grand Canyon in America has been washed out.

The ark came from Mount Everest, where 1996 has been checked, whether Noah had left a commemorative tablet to the water depth being mentioned in Genesis 7:20. And for avoiding quarrels on the correct philosophy at all oxygen deficiency due to these contexts, at the summit stand of Mount Everest flutter Tibetan prayer flags, which at least contain the great *Om mani padme hum*.

The flight Everest – Ararat due to the Bible statements needed one day and obviously took place in such a way, that during the whole journey the watershed stayed always under the ark. This circumstance avoided a chaotic movement of Noah's ark during the journey. Whether the Indus valley at Nanga Parbat has been breaked open before or after passing by the ark, has not yet been clarified finally. Because of earth rotation the course Everest – Ararat is a curvation to the right hand side. These considerations show by the inertia of the water, that the duration of a day has been about constant during the whole great flood, thus not all physical riddles on the construction of the earth can be solved finally (see Jeremia 31:37).

To the author science always is checking without knowing the result before. Therefore all interested persons and also all critics be invited to check the connections without knowing the result before. The character of such checks is, that also unexpected results can occur.

For requests and suggestions the author is willingly at your disposal - if the Lord wants and we shall live (see James 4:15).

Literature

[1979MR] (Allan) Maberly, (Renate) Brauweiler: *Gott spricht tibetisch*, German translation of *God spoke Tibetan* by Evangel Bible Translators, Orange/USA and Harvest House Publishers, Irvine/USA, Verlag der Liebenzeller Mission, Bad Liebenzell, 1st edition, (1979).
